Nobody Left Behind

AI Rollout Readiness Assessment

Post-Upgrade Market Benchmark | v2.1 | April 2026

Executive Summary

The Nobody Left Behind AI Rollout Check is the only assessment that measures whether the people in your organization are actually being prepared for AI. It does not ask about data infrastructure or cloud strategy. It asks whether communication is clear, whether roles are mapped, whether training is real, and whether managers can have honest conversations about what AI means for their teams.

After benchmarking against 20+ competing assessments from the Big 4, Gartner, Cisco, Microsoft, Prosci, and independent providers, the NLB assessment covers 11.5 out of 12 people-side dimensions. The closest competitor (Prosci ADKAR) covers about half. No Big 4 assessment covers more than 4. The NLB assessment also covers 3 bonus dimensions that no competitor addresses at all: timeline expectations, data guidelines, and cut/create framing.

Assessment at a Glance

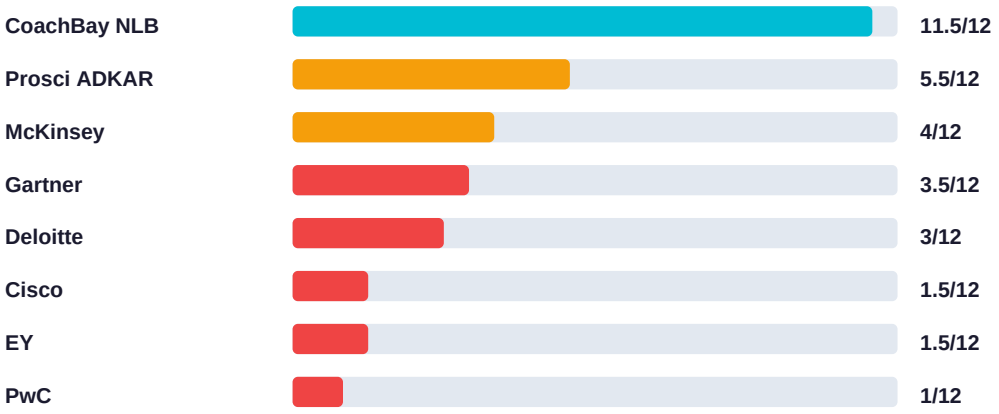
Format: 21 statements across 3 sections (WHY / WHAT / HOW), 7 each

Scale: 5 point Likert (strongly disagree to strongly agree), max score 105

Stage aware: Respondents select Early, Active, or Scaling. Advice adapts to stage.

Tracking: All 21 individual scores logged to Google Sheets automatically

Coverage Scores (out of 12 people-side dimensions)



Dimension Coverage: NLB vs. Market

Each row represents a people-side dimension critical to AI rollout success. "Yes" means the assessment directly measures it. "Partial" means it is mentioned but not specifically assessed. "No" means it is absent.

Dimension	NLB	Deloitte	McKinsey	PwC	EY	Gartner	Prosci	Cisco
Communication/Why	Yes	Partial	Partial	No	No	No	Yes	No
Workforce Anxiety	Yes	No	Partial	No	No	No	Partial	No
Psychological Safety	Yes	No	No	No	No	No	No	No
Change Fatigue	Partial	No	No	No	No	No	Partial	No
Role/Task Mapping	Yes	Partial	Yes	No	Partial	Partial	No	No
Gen Z / Junior Impact	Yes	No	No	No	No	No	No	No
Shadow AI	Yes	Partial	No	No	No	No	No	No
Tool Equity / Access	Yes	No	No	No	No	No	No	Partial
Manager Readiness	Yes	No	Partial	No	No	Partial	Partial	No
Training Quality	Yes	Partial	Partial	Partial	Partial	Yes	Yes	Partial
Reinforcement	Yes	No	No	No	No	No	Yes	No
Digital Native Myth	Yes	No	No	No	No	No	No	No

Three Bonus Dimensions (No Competitor Covers These)

- **Timeline Expectations (Statement 12):** Asks whether people know the expectations and timeline for AI adoption.
- **Data Guidelines (Statement 13):** Asks whether people know the data rules for AI tools. Critical for responsible AI use.
- **Cut/Create Framing (Statement 6):** Asks whether people can see what AI creates, not just what it cuts. A coaching reframe no assessment includes.

Structural Advantages

- **Stage aware scoring:** Respondents select Early, Active, or Scaling. The advice they receive adapts to where they are in their AI journey. No competitor does this.
- **Per statement tracking:** All 21 individual answers are logged to Google Sheets automatically. Most assessments return aggregate scores only.
- **Balanced 7/7/7 structure:** WHY, WHAT, and HOW sections each have 7 statements, aligned with Prosci ADKAR sequencing.
- **Framing note:** A psychological framing note at the top reduces defensiveness and normalizes mid-range scores. Rare in the market.
- **Under 10 minutes:** 21 items versus 30 to 70+ for most competitors. Designed for busy leaders.

Five Unique Elements (Not Found in Any Competitor)

- **1. Gen Z / Junior Impact (Statement 10):** The only assessment that explicitly asks whether the organization has a plan for how entry level roles will grow alongside AI. No Big 4 or independent assessment mentions Gen Z by name or assesses age specific impact.
- **2. Digital Native Myth (Statement 16):** Explicitly challenges the assumption that younger workers already understand AI by asking whether everyone gets the same structured support regardless of role, age, or background.
- **3. Tool Equity (Statement 17):** Calls out the gap between paid AI tools for senior people and free versions for everyone else. No competitor assesses this.
- **4. Manager Conversation Readiness (Statement 19):** Goes beyond whether managers are trained on AI to whether managers can have honest conversations about job security fears.
- **5. Psychological Safety (Statements 5, 7):** Statement 5 asks whether fears have been acknowledged openly. Statement 7 asks whether people feel safe saying they are worried. Together they treat psychological safety as a prerequisite for AI adoption.

Academic Framework Alignment

The assessment is not just opinion based. Each section aligns with validated academic frameworks, giving it credibility with research minded audiences.

- **Prosci ADKAR:** WHY = Awareness + Desire. WHAT = Knowledge. HOW = Ability + Reinforcement. The 7/7/7 structure mirrors ADKAR sequencing.
- **AI Anxiety Scale (AIAS):** Statement 4 captures cognitive anxiety about personal impact. Statement 5 captures affective anxiety through open acknowledgment of fears.
- **Edmondson Psychological Safety:** Statements 5 and 7 directly measure team level psychological safety in an AI context.
- **UTAUT2:** Statement 4 (performance expectancy), Statement 15 (effort expectancy via training), Statement 18 (social influence via managers).
- **Transformation Fatigue (HBR 2025):** Change fatigue is addressed indirectly through Statement 3 (investment in people framing) and Statement 5 (acknowledging fears). The research informs the overall design.

What Competitors Do Better (Honest Assessment)

- **Technical maturity:** Gartner, Cisco, and Microsoft assess data infrastructure, governance, and technology stacks. NLB is people focused by design. It works best alongside a technical readiness assessment.
- **Benchmarking data:** Cisco has assessed thousands of companies globally. NLB is new and does not yet have benchmarking data. This will build over time.
- **Validation:** Academic instruments like the AI Anxiety Scale have Cronbach's alpha of 0.87+. NLB is research informed but has not undergone formal psychometric validation.

Competitive Position

The AI readiness assessment market splits into two worlds. On one side, the Big 4 and tech companies (Cisco, Microsoft, Gartner) assess organizational maturity: strategy, data, infrastructure, governance. They are useful for CIOs and boards. On the other side, change management frameworks (Prosci ADKAR, Edmondson's psychological safety) address the human side but are general purpose, not AI specific.

The NLB assessment sits in a gap that nobody else occupies: a people specific, AI specific rollout readiness tool. It does not ask about your data infrastructure or your cloud strategy. It asks whether the humans in your organization are actually being prepared for what is coming.

What Changed in v2.1 (April 2026)

- **Statement quality:** Seven double barreled statements fixed. Each item now measures exactly one thing.
- **Statement 1 replaced:** The original change fatigue item was replaced with a clear AI vision statement. Opens the assessment with the big picture and leads into Statement 2 (can someone two levels down explain the why).
- **Change fatigue:** Now addressed indirectly through Statement 3 (investment in people, not compliance) and Statement 5 (fears acknowledged openly). A deliberate design choice, reducing coverage from 12/12 to 11.5/12.
- **Stage aware scoring:** Respondents select Early, Active, or Scaling before answering. The advice adapts to their rollout stage.
- **Google Sheets tracking:** Individual answers for all 21 statements are logged automatically for trend analysis across clients.
