AI Training for Swire Properties

Building AI fitness from strategy to daily practice

SPROPS has built strong foundations: 20+ AI initiatives delivered since 2024, a digital curriculum launched across the organisation, and 100+ new initiatives now proposed by Directors for 2026. The focus areas are clear: Operating Effectiveness, Deeper Insights, and New Digital Propositions. The goal is not AI adoption. The goal is better business through better decisions, better leadership, and better outcomes for your people. AI is how you get there faster. Our approach focuses on using AI as a thinking partner, not just a productivity tool, at every level of the organisation.

Five Workshops. One Journey.

Mapped to SPROPS audience segments, from strategic direction to daily practice.

Senior Leaders
DTCs and Directors

The AI Manifesto
Write the enterprise AI manifesto. Set the direction.

Senior Managers
DTCs and GMs

AI Leadership Sprint
Build AI leadership habits. Turn personal use into team wide impact.

AI Strategy Sprint
Learn to think strategically about AI. Not just which buttons to click.

Frontline
Change Agents and wider SPROPS

AI Core Sprint
Build daily AI skills. Use AI as a thinking partner, not just a search engine.

Cut & Create Sprint
Identify what to stop, what to start, what to amplify.

Direction flows down, capability builds up

The AI Manifesto is a full day workshop (~7 hours). All sprints are standalone half day sessions (3 to 4 hours). They can be delivered individually or as a connected sequence. All workshops are hands on and practical, designed for groups of 8 to 20 people.

How this connects to SPROPS priorities

Gartner frames AI value as three business cases: Defend (Return on Employee), Extend (Return on Investment), and Upend (Return on Future). SPROPS's 100+ initiatives are heavily weighted toward Operating Effectiveness (Defend). There is a push to increase ROI through deeper insights and process gains. But the foundation of all three is ROE: giving your people great tools, great training, and the skills to use them. That is where these workshops live. The AI Manifesto sets the direction (all three). The Leadership Sprint equips leaders to drive all three through the Three Buckets exercise. The remaining Sprints build daily capability (ROE). Cut & Create moves teams into new value creation (ROI).

Workshop Details

1 The AI Manifesto

AUDIENCE: C-Level executives and Senior Leaders (8 to 15 people)

A focused full day workshop (~7 hours) where your leadership team writes a draft AI manifesto: a clear statement of what AI means to this organisation, what you expect from your people, and how you will invest. The workshop covers vision, strategy, culture, ownership, governance, guardrails, and budget. This is not a policy document. It is a call to action. Section AI data shows only 10% of companies have one. Those that do see dramatically higher adoption.

THEY LEAVE WITH:

- Draft AI manifesto (2 to 4 pages) covering vision, strategy, culture, governance, guardrails, and budget
- Three Buckets clarity: what to cut, what to create, what to amplify
- Cultural norms: what you tolerate, what you reward, where the hard lines are
- Clear ownership and guardrails: who runs it, how it gets updated, what gets funded, and what stays off limits

2 AI Leadership Sprint

AUDIENCE: DTCs and senior managers / GMs (10 to 20 people)

A half day workshop that holds up a mirror, then builds habits. Participants start with the AI Leader Assessment (26 questions, 6 dimensions) to see where they really stand as AI leaders. Then they work through the identity shift: from 'a leader who sometimes uses AI' to 'an AI leader.' Research shows that when leaders actively model AI use, team adoption jumps from 15% to 55%. The sprint includes a Three Buckets exercise for leaders to map what their teams should cut, create, and amplify, then turns these insights into a personal leadership contract.

THEY LEAVE WITH:

- AI Leader Assessment results: personal shape across 6 dimensions
- Three Buckets map: what your team should cut, create, and amplify
- Personal AI operating model mapped to five leadership areas
- Three committed AI leadership habits for the next 90 days

3 AI Strategy Sprint

AUDIENCE: DTCs, senior managers, GMs (15 to 20 people)

A half day workshop using CoachBay's 4D Framework (Define, Discover, Debate, Deliver) to build strategic AI thinking. Participants work through real business challenges, not abstract scenarios. They learn to evaluate where AI adds value, where it does not, and how to make better decisions about AI investment and priorities.

THEY LEAVE WITH:

- Strategic thinking skills: evaluate AI opportunities with judgement, not hype
- Practice with the CRIT framework for challenging AI outputs
- A personal AI strategy connected to their role and department goals
- Confidence to lead AI conversations with their teams

Workshop Details (continued)

4 AI Core Sprint

AUDIENCE: Change Agents, wider SPROPS staff (15 to 20 people)

The hands on skills workshop. Participants learn the 5 AI Employee roles (Assistant, Expert, Coach, Creative, Conductor) and practice each one using their actual work. This is not prompting training. It is teaching people to think about AI as a colleague with five different skill sets, then use the right one for the right task.

THEY LEAVE WITH:

- Practical experience with all 5 AI Employee roles using real work
- A personal AI action plan: three things to start doing differently this week
- Understanding the difference between using AI and thinking with AI
- Confidence to experiment with AI tools already available at SPROPS

5 Cut & Create Sprint

AUDIENCE: Change Agents, wider SPROPS staff (15 to 20 people)

Two structured exercises using CoachBay's original canvas tools. The 9R Deletion Audit helps teams identify work to stop doing or hand to AI (the Cut). The 9P Digital Project Canvas helps teams define new, higher value work to start (the Create). Together, they ensure AI adoption is not just about efficiency but about building something new.

THEY LEAVE WITH:

- Completed Deletion Audit: specific work items identified for AI handover
- Completed Project Canvas: a new initiative scoped from person to prototype
- The two sides of AI adoption in one session: stop and start with intention
- Practical tools teams can reuse for every new AI initiative

Suggested Next Step

We recommend starting with The AI Manifesto for senior leaders to set strategic direction, followed by the AI Leadership Sprint to equip senior managers with the habits to lead the change. The Strategy Sprint deepens strategic thinking for senior managers. Core Sprint builds capability across Change Agents and wider staff. The Cut & Create Sprint can run alongside or after the Core Sprint to move from skills to action. Each workshop stands alone, but the full sequence creates lasting organisational change.

Tomas Bay | coach@coachbay.com | coachbay.ai

Sprints are half day (3 to 4 hours). Manifesto Workshop is full day (~7 hours).
