AI Project Sprint

for results

Helping cross functional teams use AI to find new and better ways to move real business projects forward.

AUDIENCE	FORMAT	CLASS SIZE
Cross functional project teams	3.5 to 4 hours. In person or online.	8 to 20 people

What you will do

For teams with a real business challenge who want to make tangible progress in a single session. Each team brings a genuine project, whether it is revenue, operations, supply chain, or customer experience. Using the CRIT framework and AI as a thinking partner, teams pressure test their assumptions, discover options they had not considered, and build sharper plans. Cross functional composition ensures the context and answers are richer and more useful.

After this, you can

- Define the real challenge clearly using structured prompts that give AI the context it needs to add genuine value.
- Discover new options by having AI interview your team about context, constraints, and goals before proposing tailored moves.
- Debate and stress test ideas with AI playing different perspectives, so risks and blind spots surface before decisions are made.
- Deliver a sharper project plan with concrete next steps, clearer priorities, and recommendations built by the team with AI support.

What you walk away with

- Tangible progress on a real business project your team cares about.
- A set of AI generated options and recommendations stress tested by the team.
- A repeatable process for using AI on any future project challenge.
- Confidence that cross functional collaboration with AI produces better outcomes.

Optional: Pit Stops

Each Sprint can be followed by two Pit Stops (1 hour each, max 6 people) to turn learning into lasting habits.
