Is Your Team Ready to Lead with AI?

Twenty one questions worth sitting with honestly. No right answers. Just a clear look at where your organization is today and what it would take to move forward.

01 Where your team is today

1. When you think about your team's AI use, who comes to mind? Most people or a handful?
2. When you watch your team use AI, what are they actually doing with it? Handling routine tasks, thinking through problems, or building something more sophisticated?
3. Think about the work your team repeats every week. Which of those workflows would look different if AI was handling part of them?
4. Is your team's AI use personal and private, or is it shared and built into how the team works together?
5. When did you last change how you personally work because of AI? What changed?
6. Have you tried to shift your team's AI use before? What got in the way?
7. Your organization has likely already spent money on AI tools or training. What came of it?

02 What it is costing you

8. Where in your team's day is time being spent on work that follows clear rules and patterns? What would change if AI was handling that?
9. Where is slow or inconsistent AI adoption showing up in your results right now?
10. If your strongest competitor was using AI more effectively than you, how quickly would you know?
11. How is AI changing what your customers expect from you? Are you ahead of that or behind it?
12. Where in your industry is AI already redefining the competitive standard? Where do you sit relative to that?
13. What decisions are being made in your organization today that AI could make sharper? Are they?
14. What is the real cost of your team not changing? Not the risk. The actual cost, today.

03 Where the capability gaps actually are

15. Your team likely uses AI as a tool for tasks. How many use it as a thinking partner, an expert on demand, or a creative collaborator? What would it take to get there?
16. Your middle managers are where AI adoption either happens or stalls. What are yours doing with it?
17. Are your data, tools, and governance ready to support the way you want to use AI? What is missing?
18. If you asked your team to change how they work with AI starting next Monday, what would actually happen?
19. What is the gap between how enthusiastic you are about AI and how ready your organization actually is?

04 What success looks like and who owns it

20. Who in your organization owns AI adoption right now? Is that person set up to succeed?
21. Who else needs to be part of this conversation that is not in the room today?
22. What investment are you prepared to make, in time, money and leadership attention, to close the gap you have described?
23. How would you know in six months that this had worked? What would you see that you do not see today?
24. What needs to happen in the next 90 days for this to move from a conversation to a result?

The answers to these questions are your starting point. The next step is a conversation.
