Where Is Your Team With AI?

Most leaders I work with are not short of AI tools. They are short of clarity about where to focus first. After working with thousands of leaders across Asia, I see the same three patterns again and again. The one that feels most familiar is your starting point.

01

Your team uses AI, but not as a team

YOU MIGHT RECOGNIZE THIS IF...

- Individual pockets of use, no shared approach
- Results vary widely depending on who you ask
- The curious few get value. Everyone else watches
- No common language for what good looks like

START WITH

Core Sprint Build a shared foundation and move the whole team forward

02

AI is in the room, not in your strategy

YOU MIGHT RECOGNIZE THIS IF...

- Leaders experiment with AI personally
- But AI has not changed how decisions get made
- Options stay narrower than they need to be
- Strategic thinking still works the same way it always has

START WITH

Strategy Sprint Use AI to define challenges better and sharpen decisions

03

People are waiting to be told it is safe

YOU MIGHT RECOGNIZE THIS IF...

- Genuine interest sits alongside real anxiety
- Leadership enthusiasm and team readiness are out of step
- Early adopters are unsupported and isolated
- Change is happening to people, not with them

START WITH

Change Sprint Close the gap between leadership intent and team readiness

One pattern. One starting point. One sprint that moves your whole team forward.
